

UID EXPERIMENT-7

Name: Shanmuganathan S

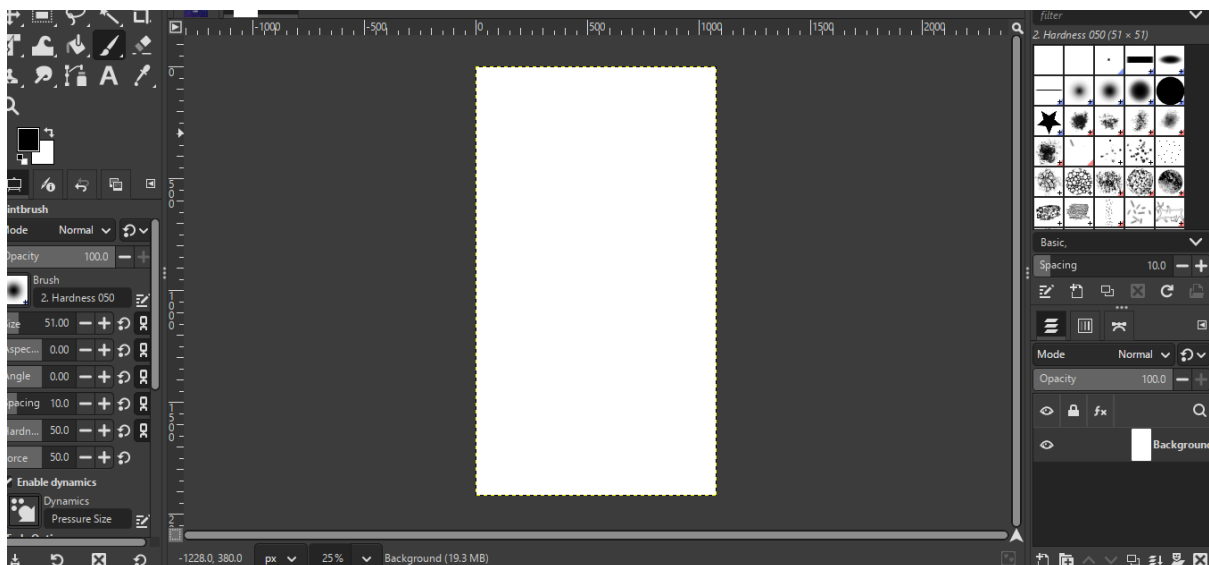

Reg no.: 230701307

Step 1: Install GIMP

- Downloaded and installed GIMP from the official site: <https://www.gimp.org>
-

Step 2: Create a New Project

- Launched **GIMP** and created a new canvas:
 - Dimensions used: **1080 x 1920 pixels** (standard mobile screen size)

Step 3: Design the Base Layout

3.1 Create the Base Layout

- Used the **Rectangle Select Tool** to create layout sections:
 - Header:** For the "Login Page" title
 - Content area:** Includes "Username", "Password" input areas
 - Footer:** Contains the "Login" button

- **Bucket Fill Tool** applied to fill areas with background colors (seen in the gradient/tech-themed background in Screenshot 1)

3.2 Add UI Elements

- **Text Tool** used to insert:
 - "LOGIN PAGE"
 - "USERNAME"
 - "PASSWORD"
 - "LOGIN"
- **Brush Tool** (with Hardness 050, size 51) and shapes were used to outline input fields and buttons

3.3 Organize Layers

- Layers created and named accordingly:
 - Example: LOGIN PAGE, PASSWORD, USERNAME
 - Helps in easily modifying individual elements (confirmed via visible layer list in Screenshot 1)
-

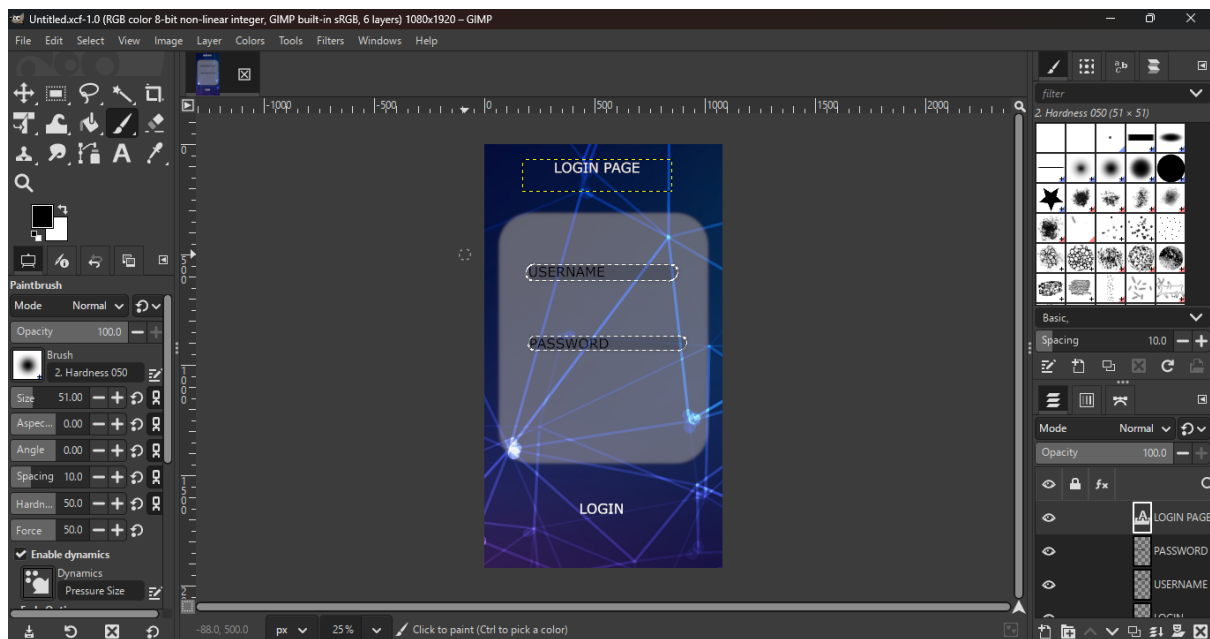

Step 4: Experiment with Color Schemes

4.1 Create Color Variants

- Duplicated the layout using:
Image tab > Duplicate
- New variants were created to apply different background or component color changes
- Screenshot 2 shows a blank variant likely prepared for alternate color schemes

4.2 Save Each Variant

- Each version exported as separate files:
 - Used: **File → Export As**
 - Formats: Likely PNG for clean sharing

Conclusion:

Hence this is how we need to build a basic ui using GIMP.
